## Part Number - DYNO-BELT-DRIVE

### Dynamo Belt Drive fitting instructions :-

- 1) Remove old pulleys and chain, place new cork seal washer over idler shaft, if too thick, use the felt washer, place the large pulley and fix using nut and washer supplied.
- 2) Fit the small pulley using sleeve nut supplied.
- 3) The belt tension must be checked with the dynamo strap tight. Tension of the belt is checked by holding belt between the two pulleys with thumb and forefinger, belt must be easily twisted through 90 degrees with almost no resistance. Then pack cavity with grease to help lube belt and keep it cool.
- 4) Re-check belt tension when dynamo strap is fully tight, and then check again when the engine is warmed up.
